Checking Antivirus Status

- From the Metro Screen (Start Screen) tap the Magnifying glass in the upper right
- Type Symantec
- Tap Symantec Endpoint Protection

• If it looks like this, make sure your Virus and Spyware Protection Definition date is at least within a couple days of the current date. If it is longer than a couple days, Tap LiveUpdate on the left and run the updates to make sure. Definitions do not come out every single day. Sometimes it can be almost a week but you can always run LiveUpdate if you are skeptical to make sure.

• If it looks like this, Click Fix

• Then Click OK.

•	Status - Symantec Endpoint Protection	- 🗆 🗡
	Status	Help
Status Scan for Threats Change Settings	Virus and Spyware Protection definitions are out of date.	Fix
View Quarantine View Logs	Th Protection Definitions	
LiveUpdate	Symantec Endpoint Protection has requested a protection definitions update. This problem will disappear after the update is complete.	Options
	ОК	Options
	Network Threat Protection Protects against Web and network threats Definitions: Wednesday, March 18, 2015 r11	Options
Symantec.		

• Close Symantec. Wait a couple minutes then open it back up. It should be OK now. If NOT let a teacher know so you can go to see the Acer support tech in your school or the teacher can call the Helpdesk to resolve your SEP issue.
